

Completely in the canal hearing aids

CIC hearing aids are completely invisible as they are inserted more deeply into the ear canal and fit so close to the ear drum, less power is required to produce excellent sound quality.

Completely in the canal hearing aids (also known as CIC hearing aids) are the tiniest and custom made hearing aids which are so small that these are almost invisible in the ear and suitable for the people with ear canals large enough to accommodate the insertion depth of these instruments into the ear.
